

Alcohol & Other Drugs Prevention Education

Help incoming and returning students make smart decisions about harmful substances.

Over 30% of college attrition is driven by alcohol and other drug-related problems.

Students who engage in unhealthy and dangerous drinking, or who misuse prescription and other drugs put their wellbeing, and even their lives, at risk.

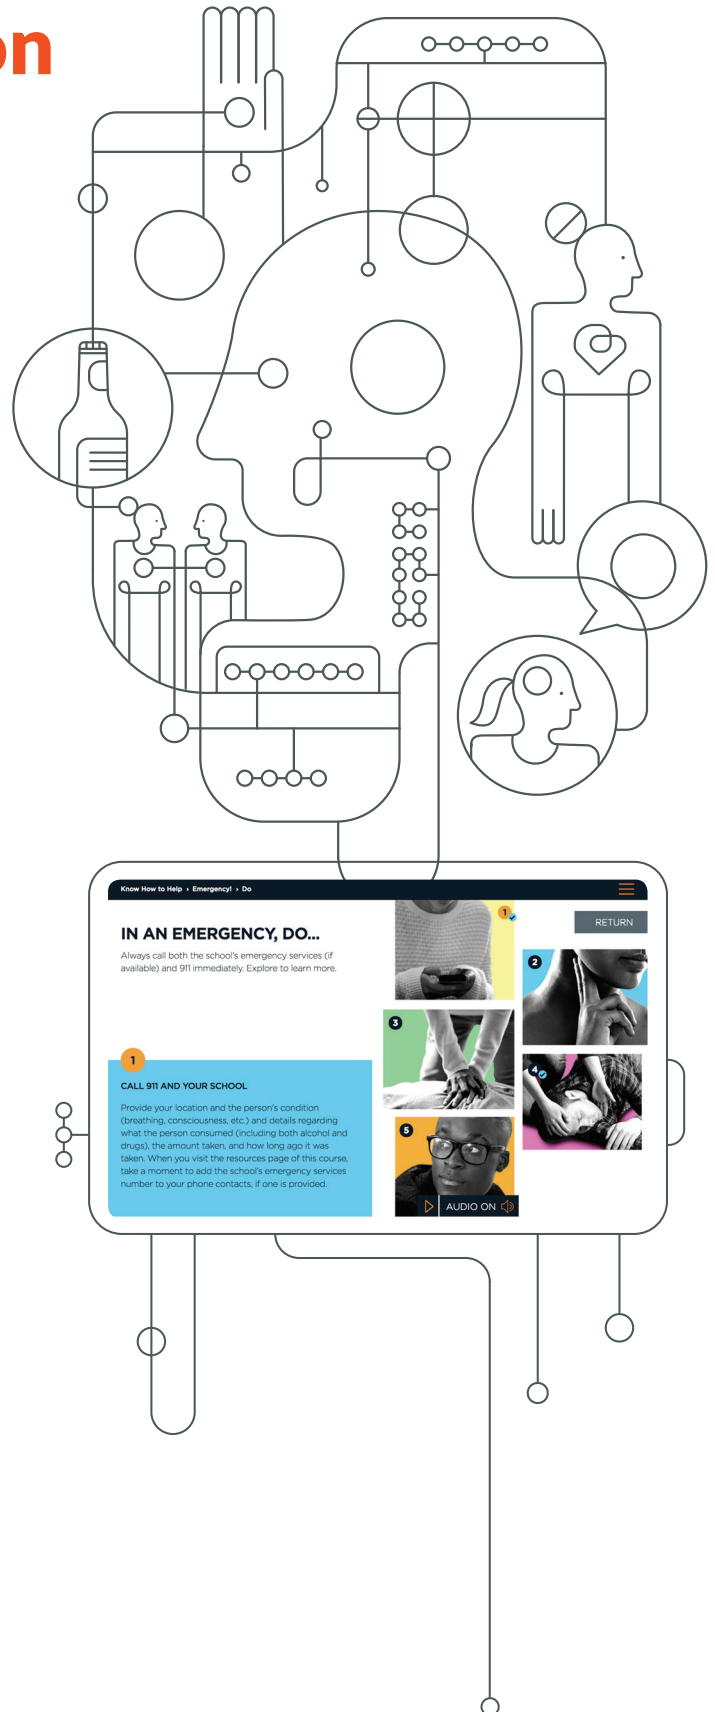

How can you help new and returning students learn responsible drinking behavior and empower the healthy majority while providing the information required by federal law?

Our Unique Approach

We provide courses that can help you create a safer, healthier campus community. Our courses engage your entire student population and mitigate risky drinking behavior through positive messaging, bystander intervention, and positive social norming. Additionally, our courses help students understand the effects of alcohol and drug misuse and abuse.

In our courses, students learn that binge drinking and drug abuse is not the norm on college campuses. In fact, limited drinking and abstainer behavior is more common - especially among first year students. Plus, our courses expose students to bystander intervention skills so that they can help their peers who need it.

Ongoing education is more effective than a one-and-done course. That's why we offer a series of courses that help students make positive decisions about alcohol and other drugs.

About Our Courses

AlcoholEDU for College

AlcoholEDU for College is a 2.5-hour curriculum designed for your entire first-year class. It's the only program specifically created for students, including non-drinkers, light to moderate drinkers, and frequent heavy drinkers. AlcoholEDU offers students a personalized experience based on their drinking choices and readiness to change.

AlcoholEDU Ongoing

AlcoholEDU Ongoing Education is a 20- to 30-minute course designed for returning students. Students begin with a pre-assessment and survey that gauges their drinking behavior. The program helps students explore how to make informed decisions about alcohol and other drugs so that they can reach their academic and personal goals. Building on the AlcoholEDU for college, this course provides additional strategies for bystander intervention.

Prescription Drug Abuse Prevention

Our 30-minute Prescription Drug Abuse Prevention course is designed to empower students with the skills and knowledge they need to make safe and healthy decisions about prescription drugs. The course introduces students to the science of addiction and provides information about the proper use, storage, and disposal of opioids, stimulants, and depressants. It prepares students to identify signs of abuse and addiction and equips learners with tactics for refusal and bystander intervention.
